

However, if you choose, you can still open an app from an unknown developer by manually overriding Privacy & Security settings.

1. On your Mac, choose Apple menu  > System Settings, then click Privacy & Security  in the sidebar. (You may need to scroll down.)
2. Go to Security, then click Open.
3. Click Open Anyway.
This button is available for about an hour after you try to open the app.
4. Enter your login password, then click OK.

The app is saved as an exception to your security settings and you can open it in the future by double-clicking it, just as you can any authorised app.
